

Document illustrating the possible dark areas (dark spots) in luminaires, as well as on reflection surfaces.

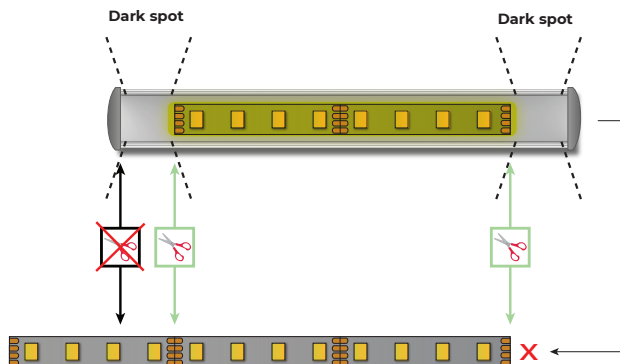

It is important to note that LED strips can only be cut at specific places (variable increments from model to model).

NOT REALISTIC PROPORTION

OPTION A

We can adhere to the exact measurements provided on your work order even if it means that there could possibly be dark spots (dark areas) at the ends of the luminaire.

OPTION B

If we find that with the measurements provided on your work order, dark spots (dark areas) are foreseeable, we can slightly shorten the lengths of your fixture in order to eliminate these dark spots.

OR

OPTION C

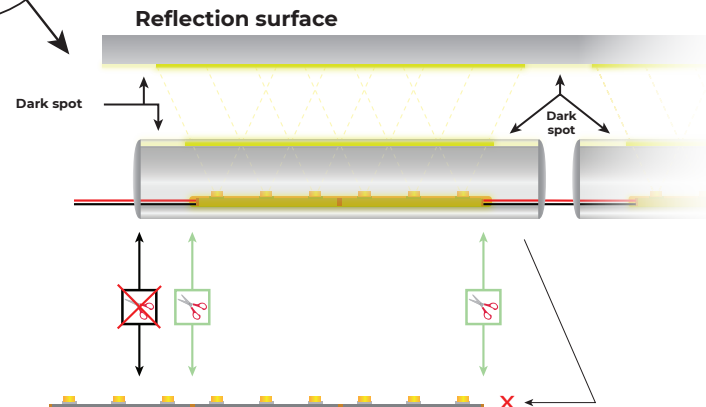

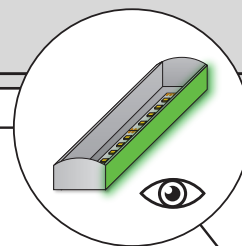

If we find that with the measurements provided on your work order, dark spots (dark areas) are foreseeable, we can slightly extend the lengths of your luminaire in order to eliminate these dark spots.
